Installation Instructions:

If you are using a M-S USB cash drawer then uninstall the existing drivers for the USB Cash drawer by going to Control Panel > Add Remove Programs.

Connect the drawer to the computer. The new module doesn't require drivers and the drawer will install automatically as a Human Interface Device.

Download the setup file from the internet (http://www.mscashdrawer.com/support.php). Setup will install a test utility and the MSPOS_USB.dll file on your computer.

Overwrite the existing MSPOS_USB.dll in any other directory than the default directory with the dll file on the CD.

No programming changes are required with the new module.

If DIP Switch 1-3 are changed after the drawer is installed, the drawer needs to be unplugged before the ID Change is registered in the program.
